

**Superior Lubrication /
Fretting Resistance**

Grease

Grease is injected into the hub unit as a lubricant to maintain bearing function.

In addition to standard grease, JTEKT has a lineup of low-torque specification grease that contributes to improving fuel efficiency.

	Grease Service Life	Fretting Resistance	Seizure Resistance	Low friction torque	Operating Temperature Range
Mineral-oil Urea Grease (standard)	★	★	★	★	-30~150°C
Synthetic-oil Urea Grease (low-torque specification)	★★	★★	★★★	★★	-40~150°C
