COMBINED NEEDLE ROLLER BEARINGS NEW! PRODUCT

NKX...Type
 NKX...Z Type
 NXXI... Type
 NXXI...Z Type

Combined Type Needle Roller Bearings are combinations of a radial needle bearing (subjected to radial load) and a thrust ball bearing (subjected to axial load). They are compact and can be subjected to radial loads and axial loads simultaneously. Thus, it allows the limited space of using bearing inside of equipment and can have a compact design. Bearings with a dust cover are non-separable and can be handled easily, and is therefore effective in preventing scatter of grease caused by centrifugal force inside of thrust bearings.
